Size	Per Pallet	Barcode
56L	80	5 031639 888481

John Innes Peat Based Composts

The John Innes compost range offers a nutrient rich blend of loam, peat and horticultural grit. By incorporating loam it reduces the need for peat, making it a more environmentally sustainable growing medium. These John Innes formulations are designed to help you achieve optimal growing results promoting strong and healthy root development in your plants.

John Innes No.1 Compost

The addition of loam gives the young plants a base suited for young plant root development and to allow for the changing nutritional requirements of a growing plant.

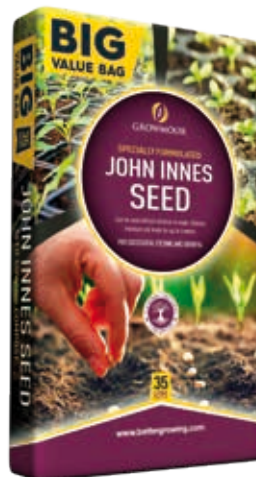

Size	Per Pallet	Barcode
25L	70	5 031639 888245
35L	70	5 031639 888511

John Innes No.3 Compost

Provides mature plants with a stockpile of nutrients for potting on and final potting of mature plants into large containers or pots.

Size	Per Pallet	Barcode
25L	70	5 031639 888269
35L	70	5 031639 888535

John Innes SEED Compost

Ideal for sowing seeds and nurturing seedlings, it provides balanced nutrients and a loam base that improves water control and moisture retention for healthy growth.

Size	Per Pallet	Barcode
25L	70	5 031639 888238
35L	70	5 031639 888504

John Innes No.2 Compost

The carefully balanced mix of loam, peat and grit creates the ideal conditions for potted plants, whether you're transplanting or potting them for the first time.

Size	Per Pallet	Barcode
25L	70	5 031639 888252
35L	70	5 031639 888528

John Innes ERIC Compost

Provides the perfect structure for plant roots and maximum green leafing for calcifuges (lime hating plants) such as Rhododendrons, Azaleas and Camellias.

Size	Per Pallet	Barcode
25L	70	5 031639 888290
35L	70	5 031639 888542

GroWorm Enhanced Compost & Planter

Although organic gardeners including our partner Charles Dowding have been using worm castings for many years, the wider gardening community is only now beginning to discover their incredible benefits for plant health and growth.

Here at GroWorm, many of you have asked whether worm castings are suitable for all plants and the answer is a resounding yes!

Worm castings are rich in nutrients and beneficial microbes, making them ideal for almost any type of plant. Whether you're growing vegetables, flowers, herbs or houseplants. Incorporating worm castings can significantly boost plant health, growth and resilience. In fact our research on GroWorm worm castings has shown that fruiting and vegetable plants can produce yields up to eight times greater.

Organic All Purpose

Peat based compost enriched with premium worm casts, a nutrient packed blend designed to boost plant growth, health and vitality.

Size	Per Pallet	Barcode
20L	140	5 031639 000647
40L	100	5 031639 000654

These castings are also highly versatile and can be used throughout your garden in beds, borders, containers and hanging baskets. Their neutral pH makes them safe for both acid-loving plants like blueberries and hydrangeas.

Studies have shown that worm castings can help suppress a range of soil-borne and foliar diseases, including pythium and botrytis. Research by Dr. Clive Edwards at the University of Ohio demonstrated that the microbial activity in vermicompost (worm compost) plays a key role in preventing plant diseases, adding another reason to make worm castings a part of your regular growing routine.

Peat Free Organic All Purpose

100% peat free compost enriched with premium worm casts a sustainable, nutrient-rich blend that promotes strong healthy plant growth.

Size	Per Pallet	Barcode
20L	140	5 031639 000470
